More canteen cards for the School Canteen Association.

School canteen association “Assiette Scolaire” uses a Zenius printer to print its canteen cards.

THE CHALLENGE

To find a high performance printer to issue larger volumes of canteen cards.

“Assiette Scolaire” is a parent association that was set up to ensure the smooth running of the privately run canteens at Sainte Marie elementary school and Collège St Joseph high school in the town of Vallet, France. These canteens serve on average 1,000 meals each day to both elementary and high school students. **To access these meals, the students need their own canteen cards.**

And for the past five years, these cards have been issued using the Evolis Badgy solution. Every year, the association would issue 300 to 600 cards, in addition to replacements. This solution met the needs of the association. However, **given the increase in student numbers over recent years, this printer was no longer suitable.** Indeed, the association now estimates that it needs to issue around 700 cards per year for all its students.

So it was looking for a **high performance solution with more speed and, above all, with a higher card issuing capacity.**

THE SOLUTION

Zenius, the solution for medium series card printing

After five years of using the Badgy solution, the association naturally chose another Evolis solution. It approached IBCard, an Evolis reseller, who guided the association toward a solution adapted to its new needs: the Zenius printer.

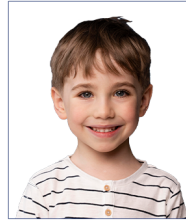

Like Badgy, the new solution offers **single-sided, full-color printing, which means that the card has retained the same design despite the change in solution.** It also includes all the **same essential card data** such as:

- ⊙ Student photo
- ⊙ Date of birth
- ⊙ School
- ⊙ Class
- ⊙ Student address
- ⊙ Barcode

The association was also keen that in addition to the high school students the elementary school pupils could have their own cards too. Its main aim was to be **able to issue a larger volume of cards more quickly** than the previous solution. With the Zenius printer, the association can **issue customized canteen cards to all its students and instantly replace lost cards.**

The new Zenius solution meets our new expectations and allows us to print a higher volume of cards with more speed

Philippe Bazon

Manager for the "Assiette Scolaire" association

THE RESULT

All student canteen cards are issued instantly with a printing capacity adapted to need.

The association is delighted with its acquisition of the Zenius solution. The benefits of this printer include its **speed of printing, flexibility, and autonomy.** All must-haves for "Assiette Scolaire." Thanks to Zenius, the secretary of the association, who is the main user of the solution, can now print a larger volume of cards in a shorter period of time. Indeed, the Zenius is configured to **issue about 120 cards/hour.** This capacity means that the association can issue the desired volume of cards each year with more speed.

What's more, its compactness and small size ensure **easy integration.** Thanks to our reseller IBCard, **an optimal installation was assured.**
